

IDEA 1:

Project title 1 (Descriptive title that captures your idea1)

How has COVID-19 affected the student's performance in online setting.

What you want to do?

In this project, I want to study how has the pandemic affected the education system. Since the pandemic, students are attending school and learning from home through online setting. I want to study how this new environment has affected the performance of the students in terms of participation, scores, and the overall academic excellence.

Why should we care?

Being myself in the situation, I have seen the difficulties a student might face studying from home. Many students don't have proper set up, facilities at their place to concentrate and perform well in their studies. If we can study these effects, we can find some solutions or recommendations to help students in the remote environment. Also, we can be prepared for similar situations in the future and try to mitigate the negative impact of such pandemics or major incidents on education system.

IDEA 2:

Project title 2 (Descriptive title that captures your idea2)

Has COVID-19 led to rise of hate speech/ Offensive speech on different social media platforms like Twitter, Reddit, Facebook?

What you want to do?

Reading the paper about Hate and Offensive speech, I am keen to go deep in this domain and understand how to identify hate speech on other platforms like Reddit, Facebook. I want to see how this pandemic has made any impact on users' mindset and is there any increase in the hate speech on the social media platform. For this, I would see the activities of users before and after pandemic. I would also do a cross platform analysis to identify which platforms have seen more impact.

Why should we care?

Understanding the relation between pandemic and the hate speech, we would be able to identify if there is a negative impact of COVID-19 on people's mindset and help understand the mentality of the users using hate speech on social media. This analysis can help different social media platforms to review and control the content on their sites.
