

IDEA 1:**Project title 1 (Descriptive title that captures your idea1)**

Has there been an increase in hate speech on social media platforms over the years?

What you want to do?

I would want to analyze the hate speech data collected from multiple social media platforms like Reddit, Facebook, Twitter etc and then analyze the trends over the years to see if there has been a relevant change over the years. To scope it down further, I could possibly also have a post/pre COVID timeline instead,

Why should we care?

Hate speech is evidently increasing and with more and more issues being caused, this might help to analyze the root cause of this issue and help to solve this in the future.

IDEA 2:**Project title 2 (Descriptive title that captures your idea2)**

How have student performance been affected by the challenges of being in a lockdown?

What you want to do?

I want to analyze the trends of performances of students pre/post COVID times. Studying from home, attending lectures on Zoom has been a difficult experience for me as a student and would love to know if it's actually same for others as well.

Why should we care?

This year just proves the need for us to take care of such situations as these can happen anytime in the future.
